Attorney Docket No.: Q95565

AMENDMENT UNDER 37 C.F.R. § 1.114(c) U.S. Application No.: 10/584,709

## **AMENDMENTS TO THE SPECIFICATION**

Please delete the present Abstract of the Disclosure.

Please add the following new Abstract of the Disclosure:

The invention provides an indium oxide-tin oxide powder which can be produced at low cost and which can provide a high-density sputtering target having a prolonged target life, and a sputtering target employing the powder. The indium oxide-tin oxide powder containing an In-Sn oxide as a predominant component is characterized in that the oxide powder contains no compound oxide (In<sub>4</sub>Sn<sub>3</sub>O<sub>12</sub>) detectable through X-ray diffraction and has a SnO<sub>2</sub> solid solution amount in In<sub>2</sub>O<sub>3</sub> of 2.3 mass% or more, the SnO<sub>2</sub> solid solution amount being calculated from the precipitated SnO<sub>2</sub> content (mass%) obtained from the ratio between integral diffraction intensity attributed to In<sub>2</sub>O<sub>3</sub> (222) and integral diffraction intensity attributed to SnO<sub>2</sub> (110).
